The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2, 9-10 and 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishiyama in view of Dietz.

Nishiyama teaches, at column 14, lines 30-40, a method of calculating the pressure drop from injection by sampling data as noted in the above listed claims. An algorithm is used to produce after injection event information via the CPU.

Dietz teaches a single pressure sample taken between injections and used to determine the timing of the next injection.

It would have been obvious to use the Dietz sampling technique to set the timing of Nishiyama for the next injection because the use of a single sample was the prior art modified by the Nishiyama device and therefore commonly known to one of ordinary skill in the art.

Claims 5-7, 11-14 and 18-20 remain allowed.

Applicant's arguments filed March 1, 2005 have been fully considered but they are not persuasive.

In particular, the applicant argues that Deitz would alter the Nishiyama teaching against its own teachings. As noted in the rejection however Nishiyama itself teaches that it was an improvement (via additional sampling) over known techniques. One such

known technique is the single sample taken between injections taught by Dietz. Furthermore, Nishiyama is being used to show that it was clearly known to sample between injection events and use this information to control the next event. Finally, applicant's use of a "predetermined angle" is broad in that such an angle could be "predetermined" by virtue of it being between the injection events.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
